Railway Ecology - Luís Borda-de-Água
2017-09-18

This book is open access under a CC BY 4.0 license. This book provides a unique overview of the impacts of railways on biodiversity, integrating the existing knowledge on the ecological effects of railways on wildlife, identifying major knowledge gaps and research directions and presenting the emerging field of railway ecology. The book is divided into two major parts: Part one offers a general review of the major conceptual and theoretical principles of railway ecology. The chapters consider the impacts of railways on wildlife populations and concentrate on four major topics: mortality, barrier effects, species invasions and disturbances (ranging from noise to chemical pollution). Part two focuses on a number of case studies from Europe, Asia and North America written by an international group of experts.

Oxygen-Ozone Therapy - V. Bocci 2013-06-29

When I was about fifteen, my Biological Sciences teacher, Prof. N. Benacchio, lent me a book by

Paul de Kruif "The Microbe Hunters" and I remained fascinated by infectious diseases. I was intrigued by the potency of virulent bacteria which are constantly trying to invade our bodies and often overcome what today we call innate and adoptive immunity. Indeed, shortly after that, I was struck by his tragic death due to peritonitis. Later, while studying medicine (although medical knowledge in the 1950s was almost primordial compared with today), I soon realised how the various biological systems were wonderfully organised but at the same time frail and how our life could end in a few minutes. Slowly it became obvious that our "wellness" was the result of a dynamic and very unstable equilibrium between health and disease. This unstable equilibrium could be broken forever if the body's response could not reverse the pathological state. I stuck a sort of poster on the wall of my room with these three words and connecting arrows: HEALTH ~ - ? DISEASE - ? DEATH As I don't believe in another world after death, it became obvious to me that we should

make every possible effort not only to delay death, but to try always to shift the equilibrium to the left. In this book, I will try to show that this can be achieved, as a last resort, even with ozonotherapy.

Topics in Environmental Epidemiology - Kyle Steenland 1997

A comprehensive survey of the epidemiology of common environmental exposures, this volume covers diet, water, particulates in outdoor air, nitrogen dioxide, ozone, environmental tobacco smoke, radon in homes, electromagnetic fields, and lead. Design and analysis issues, risk assessment and meta-analysis, and future directions in environmental epidemiology are also discussed. All chapters provide a review of the relevant literature as well as an overview of important methodologic issues, particularly exposure assessment and statistical methods. Most of these exposures are widespread and low-level, and are thought to increase the risk of chronic diseases that have many causes. Even though the disease risks due to these exposures may be low, the public health burden may be significant because large numbers of people are exposed. Such exposures are inherently difficult to detect via observational epidemiology. This book clarifies the problems and suggests ways to move forward. It will be useful to students and practitioners of public health, environmental health, and epidemiology.

Hormonally Active Agents in the Environment - National Research Council 2000-01-03

Some investigators have hypothesized that estrogens and other hormonally active agents found in the environment might be involved in breast cancer increases and sperm count declines in humans as well as deformities and reproductive problems seen in wildlife. This book looks in detail at the science behind the

ominous prospect of "estrogen mimics" threatening health and well-being, from the level of ecosystems and populations to individual people and animals. The committee identifies research needs and offers specific recommendations to decisionmakers. This authoritative volume: Critically evaluates the literature on hormonally active agents in the environment and identifies known and suspected toxicologic mechanisms and effects of fish, wildlife, and humans. Examines whether and how exposure to hormonally active agents occurs--in diet, in pharmaceuticals, from industrial releases into the environment--and why the debate centers on estrogens. Identifies significant uncertainties, limitations of knowledge, and weaknesses in the scientific literature. The book presents a wealth of information and investigates a wide range of examples across the spectrum of life that might be related to these agents.

Adult ADHD: Diagnostic Assessment and Treatment, Third Edition covers not only diagnostic assessment, but also comorbidity patterns as well as differential diagnosis of ADHD with for example bipolar disorder and borderline personality disorder. The symptom overlap and misdiagnosis of chronic fatigue syndrome in girls and women with the inattentive subtype of ADHD, ADD is explored. Food Rebellions - Eric Holt-Gimenez 2012-11-06

Today there are over a billion hungry people on the planet, more than ever before in history. While the global food crisis dropped out of the news in 2008, it returned in 2011 (and is threatening us again in 2012) and remains a painful reality for the world's poor and underserved. Why, in a time of record harvests, are a record number of people going hungry? And why are a handful of corporations making record profits? In Food Rebellions! Crisis and the Hunger for Justice, authors Eric Holt-Giménez and Raj Patel with Annie Shattuck offer us the real story behind the global food crisis and document the growing trend of grassroots solutions to hunger spreading around the world.

Food Rebellions! contains up to date information about the current political and economic realities of our food systems. Anchored in political economy and an historical perspective, it is a valuable academic resource for understanding the root causes of hunger, growing inequality, the industrial agri-foods complex, and political unrest. Using a multidisciplinary approach, Holt-Giménez and Patel give a detailed historical analysis of the events that led to the global food crisis and document the grassroots initiatives of social movements working to forge food sovereignty around the world. These social movements and this inspiring book compel readers to confront the crucial question: Who is hungry, why, and what can we do about it?

Pathological Gambling - Jon E. Grant 2008-05-20
The past five years have witnessed dramatic advances in research on pathological gambling --

a diagnosis often overlooked by clinicians who are unaware not only of the personal and social consequences of pathological gambling, but also of the possible treatment options. Today, clinicians can choose from an array of treatment options to substantially improve the lives of patients with this disabling illness. Eloquenty attesting to this extraordinary progress, this remarkable clinician's guide comprises the most extensive coverage on public health, clinical characteristics and treatment, psychotherapy and psychopharmacology, and interventions for adolescents, adults, and older adults. Written by the world's leading researchers on psychiatric aspects of gambling, this truly comprehensive volume discusses how to diagnose pathological gambling and provides the tools to do so. Here, 32 experts detail the clinical phenomenology, etiology, and treatment of pathological gambling, highlighting the current clinical approaches most likely to lead to early identification, symptom remission, and improvement maintenance. Useful appendixes provide specific tests, scales, and diagnostic criteria following four major sections of the book: Public Health and Epidemiology discusses prevalence and definitions of recreational, problem, and pathological gambling; the relationship between the different levels of gambling severity; and gambling's effects on societal, familial, and individual health and well-being. Clinical Characteristics covers the symptoms and sequelae of pathological gambling and the differences among adolescents, older adults, and men and women, and shows that pathological gambling -- rather than being categorized as a single disorder -- shares important features with many disorders, among them obsessive-compulsive spectrum disorders, affective spectrum disorders, addiction, and impulse-control disorder. Etiology details the realms of both psychology (behavioral, cognitive, and dispositional theories) and neurobiology (noradrenergic, serotonergic, dopaminergic, and opioidergic systems as well as familial and inherited factors) to explain the behavior of pathological gambling -- knowledge that may prove useful in understanding a range of addictive and impulsive disorders. Prevention and Treatment emphasizes the vital role of the clinician in prevention efforts, including a

prevention strategy tailored specifically for adolescents and young adults; discusses a variety of behavioral and pharmacological interventions for patients including self-help and professional-based interventions for family members; and concludes with assessments useful in diagnosing pathological gambling and monitoring symptom change. Psychiatrists, psychiatric researchers, and other mental health care professionals will welcome this book as their most up-to-date source for invaluable knowledge about and research from the world's recognized experts on pathological gambling.

The European Health Report 2002 - 2002-07

The European health report responds to the statutory requirements to provide the member states with essential public health information. The report analyses a decade of evidence on health in the Region, which embraces 51 WHO Member States with some 870 million people. While overall levels of health in the Region are among the highest in the world, the report describes widening gaps between and within countries. It confirms the strong links between socioeconomic development, health and equity in the WHO European Region. The report builds on the view that health policies cannot be isolated from other policy sectors: One central task in improving health is to reduce socioeconomic inequalities, thus placing health in the context of human development. The link between health and employment, income maintenance, social welfare, housing and education is crucial in all European Member States. The report focuses on concrete evidence useful for decision-makers in public health. Its role is to summarize and feed back to Member States the information created, deposited and accredited during the Regional Office's work with Member States on key topics and issues in public health in Europe, in the context of the values and principles of WHO as one Organization.

Sanitation Safety Planning - World Health

Organization 2015-08-06

"Sanitation Safety Planning (SSP) is a step-by-step risk based approach to assist in the implementation of the 2006 WHO Guidelines for Safe Use of Wastewater, Excreta and Greywater in Agriculture and Aquaculture. The approach can be applied to all sanitary systems to ensure the system is managed to meet health objectives. SSP assists users to: systematically identify and manage health risk along the sanitation chain; guide investment based on actual risks, to promote health benefits and minimize adverse health impacts; provide assurance to authorities and the public on the safety of sanitation-related products and services. The SSP manual is targeted at a variety of users at different levels including; health authorities and regulators, local authorities, wastewater utility managers, sanitation enterprises and farmers, community based organizations, farmers associations and NGOs. SSP brings together actors from different sectors to identify health risks in the sanitation system and agree on improvements and regular monitoring and underscores the leadership role of the health sector."--Publisher's description.

Environment in the European Union at the Turn of the Century - European Environment Agency 1999

"Despite more than 25 years of Community Environmental Policy - which has been successful in its own terms - general environmental quality in the European Union is not recovering significantly, and in some areas, it is worsening. This present report confirms both that situation and the fact that the unsustainable development of some economic sectors is the major barrier to improvement. Up to now what has been missing has been an assessment of whether the actual economic, sectoral and environmental policies over the next decade or so will bring improvements, or whether there are trends and developments pushing us off target and seriously challenging substantial progress. This report is designed to address this issue, providing information on the current state and future trends that is of direct use for deciding on sound and effective measures to really improve and protect the environment and move towards more sustainable development."--Editor.
