Law, Religion, Constitution - Dr Cristiana Cianitto 2013-09-28

What is the place assigned to religion in the constitutions of contemporary States? What role is religion expected to perform in the fields that are the object of constitutional regulation? Is separation of religion and politics a necessary precondition for democracy and the rule of law? These questions are addressed in this book through an analysis of the constitutional texts that are in force in different parts of the world. Constitutions are at the centre of almost all contemporary legal systems and provide the principles and values that inspire the action of the national law-makers. After a discussion of some topics that are central to the constitutional regulation of religion, the book considers a number of national systems covering countries with a variety of religious and cultural backgrounds. The final section of the book is devoted to the discussion of the constitutional regulation of some particularly controversial issues, such as religious education, the relation between freedom of speech and freedom of religion, abortion, and freedom of conscience.

Judicial Protection of Fundamental Rights on the Internet - Oreste Pollicino 2021-04-22

This book explores how the Internet impacts on the protection of fundamental rights, particularly with regard to freedom of speech and privacy. In doing so, it seeks to bridge the gap between Internet Law and European and Constitutional Law. The book aims to emancipate the debate on internet law and jurisprudence from the dominant position, with specific reference to European legal regimes. This approach aims to inject a European and constitutional "soul" into the topic. Moreover, the book addresses the relationship between new technologies and the protection of fundamental rights within the theoretical debate surrounding the process of European integration, with particular emphasis on judicial dialogue. This innovative book provides a thorough analysis of the forms, models and styles of judicial protection of fundamental rights in the digital era and compares the European vision to that of the United States. The book offers the first comparative analysis in which the notion of (judicial) frame, borrowed from linguistic and cognitive studies, is systematically applied to the theories of interpretation and argumentation. With a Foreword by Robert Spano, President of the European Court of Human Rights.

Islands of Slaves - Hansen, Thorkild 2017-01-17

This is third title in Thorkild Hansen's classic trilogy on the Atlantic slave trade, originally published in Danish in 1967; and the first major translation and publication of the work in English. In Europe and North America, few are aware that the beautiful and now wealthy Virgin Islands of St Thomas, St Croix and St Jan were once Danish settlements and outposts of the slave trade. Moreover that the question of the

independence of the islands was never seriously considered by the Danes, who instead sold them to the US in 1917 for 25 million dollars, several decades after the official end of slavery. This was against the will of the majority of the islanders, who were opposed to rule by the Americans, wary of their iniquitous treatment of blacks. In Denmark meanwhile, the popular view of national history presides that Denmark was the first of the imperial powers to abolish the slave trade. Thorkild Hansen's work breaks with these miss- representations of Denmark's role in the Atlantic slave trade. The third and biggest volume in the trilogy covers the period from the introduction of African slaves to the Danish islands, their official emancipation in 1848, subsequent sale to the Americans in the twentieth century, and reactions and resistance to these processes. Scrutinizing Denmark's moral obligation towards the islanders, the author draws extensively on primary sources, dramatizing and depicting real life characters into a moving and descriptive narrative. The introduction is provided by the historian A.V. Adams who states that ' Hansen's trilogy and Dako's scholarly initiative and competence in translating it contributes not only to Danes' re-reading of their own history, but also to West Indians' understanding of theirs... Hansen and Darko's contribution reaches beyond the Caribbean into the larger history of African-diaspora slave resistance... And inasmuch as the islands under consideration of the United States of America, this book through its translation becomes a text of US historiography...'

Coast of Slaves - Thorkild Hansen 2002

This is the third volume in Hansen's classic slave trade trilogy. When America was discovered and plantations established, slave labour became the principal export commodity from the Gold Coast. This book is about the history of Danish/Norwegian participation in the trans- Atlantic slave trade. It describes the organisation of the trade, the participants, the challenge, and the link with the West Indies to where the slaves were transported for work on the sugar plantations. It describes Danish purchase of islands in the West Indies, and traces how the decline in Dutch and British trade, and the abilities of the Danish administration led to a golden age in the Danish slave trade in the 1770s and 1780s. In that period, the Danish share in the total slave trade exceeded ten percent; and the decline in the trade with the growth of a new European consciousness, heralded abolition. Coast of Slaves, the first volume of the trilogy, was originally published in Danish in 1967. This English translation is edited to provide explanations about inaccessible references as well as established factual misrepresentations.

Pokémon GO! La guida essenziale per diventare Pokémon master - Cara Copperman 2016

Arts and Humanities in Progress - Dario Martinelli 2016-10-13

The book aims to introduce a research concept called "Numanities", as one possible attempt to overcome the current scientific, social and institutional crisis of the humanities. Such crisis involves their impact on, and role within, society; their popularity among students and scholars; and their identity as producers and promoters of knowledge. The modern western world and its economic policies have been identified as the strongest cause of such a crisis. Creating the conditions for, but in fact encouraging it. However, a self-critical assessment of the situation is called for. Our primary fault as humanists was that of stubbornly thinking that the world's changes could never really affect us, as - we felt - our identity was sacred. In the light of these approaches, the main strengths of humanities have been identified in the ability to: promote critical thinking and analytical reasoning; provide knowledge and understanding of democracy and social justice; develop leadership, cultural and ethical values. The main problems of humanities are the lack economic relevance; the socio-institutional perception of them as "impractical" and unemployable; the fact that they do not match with technological development. Finally, the resulting crisis consists mainly in the absence (or radical reduction) of funding from institutions; a decrease in student numbers a decrease in interest; a loss of centrality in society. A Numanities (New Humanities) project should consider all these

aspects, with self-critical assessment on the first line. The goal is to unify the various fields, approaches and also potentials of the humanities in the context, dynamics and problems of current societies, and in an attempt to overcome the above-described crisis. Numanities are introduced not as a theoretical paradigm, but in terms of an “umbrella-concept” that has no specific scientific content in it: that particularly means that the many existing new fields and research trends that are addressing the same problems (post-humanism, transhumanism, transformational humanities, etc.) are not competitors of Numanities, but rather possible ways to them. Therefore, more than a theoretical program, Numanities intend to pursue a mission, and that is summarized in a seven-point manifesto. In the light of these premises and reflections, the book then proceeds to identify the areas of inquiry that Numanities, in their functions and comprehensive approach, seek to cover. The following list should also be understood as a statement of purposes for this entire book series. These, in other words, will be the topics/areas we intend to represent. Once elaborated on the foundations of Numanities, the book features a second part that presents two case studies based on two relatively recent (and now updated) investigations that the author has performed in the fields of musical and animal studies respectively. The two cases (and relative areas of inquiry) were selected because they were considered particularly relevant within the discussion of Numanities, and in two different ways. In the first case-study the author discussed the most typical result (or perhaps cause?) of the technophobic attitude that was addressed in the first part of the book: the issue of “authenticity”, as applied, in the author's particular study, to popular music. In the second case-study, he analyzes two different forms of comparative analysis between human and non-human cognition: like in the former case, this study, too, is aimed at a critical commentary on (what the author considers) redundant biases in current humanistic research – anthropocentrism and speciesism.

Radical Technologies - Adam Greenfield 2017-06-13

A field manual to the technologies that are transforming our lives Everywhere we turn, a startling new device promises to transfigure our lives. But at what cost? In this urgent and revelatory excavation of our

Information Age, leading technology thinker Adam Greenfield forces us to reconsider our relationship with the networked objects, services and spaces that define us. It is time to re-evaluate the Silicon Valley consensus determining the future. We already depend on the smartphone to navigate every aspect of our existence. We're told that innovations—from augmented-reality interfaces and virtual assistants to autonomous delivery drones and self-driving cars—will make life easier, more convenient and more productive. 3D printing promises unprecedented control over the form and distribution of matter, while the blockchain stands to revolutionize everything from the recording and exchange of value to the way we organize the mundane realities of the day to day. And, all the while, fiendishly complex algorithms are operating quietly in the background, reshaping the economy, transforming the fundamental terms of our politics and even redefining what it means to be human. Having successfully colonized everyday life, these radical technologies are now conditioning the choices available to us in the years to come. How do they work? What challenges do they present to us, as individuals and societies? Who benefits from their adoption? In answering these questions, Greenfield's timely guide clarifies the scale and nature of the crisis we now confront —and offers ways to reclaim our stake in the future.
