*Emerging pests and vector-borne diseases in Europe* - Willem Takken 2007-10-29

This is a multi-authored book concerning the perceived threat and recorded increase of emerging pests and vector-borne diseases affecting man and animals in Europe. Historically, Europe suffered from numerous pests and vector-borne diseases, including yellow fever, malaria, plague and typhus. Introduction of hygienic measures, drugs and vector control caused the disappearance of many of these diseases from Europe. In the (sub)tropics, however, many of these diseases still thrive, causing serious health problems for humans and animals. Increased trade, leading to animal and human movement and climate change cause reason to assume that several of these diseases might become re-established or allow 'new' diseases and pests to be introduced in Europe. The recent outbreaks of bluetongue virus in North-western Europe highlights this concern, requiring an effective surveillance systems for the early detection of pests and vector-borne diseases. In 24 chapters this book provides examples of the most likely pests and diseases affecting man and animals in Europe, with emphasis on ecological factors favouring these diseases and methods for prevention and intervention. The authors are recognized experts in specific fields. All chapters are peer reviewed.

**An Anthropology of Biomedicine** - Margaret Lock 2011-09-09

An Anthropology of Biomedicine is an exciting new introduction to biomedicine and its global implications. Focusing on the ways in which the application of biomedical technologies bring about radical changes to societies at large, cultural anthropologist Margaret Lock and her co-author physician and medical anthropologist Vinh-Kim Nguyen develop and integrate the thesis that the human body in health and illness is the elusive product of nature and culture that refuses to be pinned down. Introduces biomedicine from an anthropological perspective, exploring the entanglement of material bodies with history, environment, culture, and politics Develops and integrates an original theory: that the human body in health and illness is not an ontological given but a moveable, malleable entity Makes extensive use of historical and contemporary ethnographic materials around the globe to illustrate the importance of this methodological approach Integrates key new research data with more classical material, covering the management of epidemics, famines, fertility and birth, by military doctors from colonial times on Uses numerous case studies to illustrate concepts such as the global commodification of human bodies and body parts, modern forms of population, and the extension of biomedical technologies into domestic and intimate domains Winner of the 2010 Prose Award for Archaeology and Anthropology

**Pathogenesis of Encephalitis** - Daisuke Hayasaka 2011-12-09

Many infectious agents, such as viruses, bacteria, and parasites, can cause inflammation of the central nervous system (CNS). Encephalitis is an inflammation of the brain parenchyma, which may result in a more advanced and serious disease meningoencephalitis. To establish accurate diagnosis and develop effective vaccines and drugs to overcome this disease, it is important to understand and elucidate the mechanism of its pathogenesis. This book, which is divided into four sections, provides comprehensive commentaries on encephalitis. The first section (6 chapters) covers diagnosis and clinical symptoms of encephalitis with some neurological disorders. The second section (5 chapters) reviews some virus infections with the outlines of inflammatory and chemokine responses. The third section (7 chapters) deals with the non-viral causative agents of encephalitis. The last section (4 chapters) discusses the experimental model of encephalitis. The different chapters of this book provide valuable and important information not only to the researchers, but also to the physician and health care workers.

**You Are Here** - Whitney Phillips 2021-03-02

How to understand a media environment in crisis, and how to make things better by approaching information ecologically. Our media environment is in crisis. Polarization is rampant. Polluted information

floods social media. Even our best efforts to help clean up can backfire, sending toxins roaring across the landscape. In *You Are Here*, Whitney Phillips and Ryan Milner offer strategies for navigating increasingly treacherous information flows. Using ecological metaphors, they emphasize how our individual me is entwined within a much larger we, and how everyone fits within an ever-shifting network map.

*Verità e bugie della medicina* - Giuseppe De Matteis 2013-04-13

"Verità e bugie della medicina" è un'opera dal duplice aspetto: da un lato la divulgazione scientifica, dall'altro un'inchiesta di tipo giornalistico che mette in evidenza discordanze tra presunte verità scientifiche e ricerche rigorose che dimostrano conclusioni spesso opposte. Tratta d'importanti malattie quali osteoporosi, ipercolesterolemia, malattie autoimmuni, diabete, ecc., mentre due grandi capitoli sono dedicati al cancro e alle vaccinazioni. Del cancro vengono approfonditi gli studi e le scoperte del medico tedesco Hamer e dell'oncologo italiano Tullio Simoncini. Il primo ha scoperto che tutte le persone ammalate di cancro hanno subito nel periodo precedente la malattia un trauma psichico, mentre Simoncini cura il cancro utilizzando il comune bicarbonato di sodio. L'altro grande capitolo è quello dedicato alle vaccinazioni, nel quale vengono messe in evidenza le false nozioni divulgate dalla scienza, nonché il meccanismo d'azione dei vaccini, i danni provocati e tutta una parte dedicata alle sentenze giudiziarie e alla tutela legale degli obiettori.

*Multiple Medical Realities* - Helle Johannessen 2006

Nowadays a plethora of treatment technologies is available to the consumer, each employing a variety of concepts of the body, self, sickness and healing. This volume explores the options, strategies and consequences that are both relevant and necessary for patients and practitioners who are manoeuvring this medical plurality. Although wideranging in scope and covering areas as diverse as India, Ecuador, Ghana and Norway, central to all contributions is the observation that technologies of healing are founded on socially learned and to some extent fluid experiences of body and self.

*The castle on the Hudson* - Renato Cantore 2016

**Journalism in an Era of Big Data** - Seth C. Lewis 2018-03-08

Big data is marked by staggering growth in the collection and analysis of digital trace information regarding human and natural activity, bound up in and enabled by the rise of persistent connectivity, networked communication, smart machines, and the internet of things. In addition to their impact on technology and society, these developments have particular significance for the media industry and for journalism as a practice and a profession. These data-centric phenomena are, by some

accounts, poised to greatly influence, if not transform, some of the most fundamental aspects of news and its production and distribution by humans and machines. What such changes actually mean for news, democracy, and public life, however, is far from certain. As such, there is a need for scholarly scrutiny and critique of this trend, and this volume thus explores a range of phenomena—from the use of algorithms in the newsroom, to the emergence of automated news stories—at the intersection between journalism and the social, computer, and information sciences. What are the implications of such developments for journalism's professional norms, routines, and ethics? For its organizations, institutions, and economics? For its authority and expertise? And for the epistemology that underwrites journalism's role as knowledge-producer and sense-maker in society? Altogether, this book offers a first step in understanding what big data means for journalism. This book was originally published as a special issue of *Digital Journalism*.

*Covert Regime Change* - Lindsey A. O'Rourke 2018-12-15

States seldom resort to war to overthrow their adversaries. They are more likely to attempt to covertly change the opposing regime, by assassinating a foreign leader, sponsoring a coup d'état, meddling in a democratic election, or secretly aiding foreign dissident groups. In *Covert Regime Change*, Lindsey A. O'Rourke shows us how states really act when trying to overthrow another state. She argues that conventional focus on overt cases misses the basic causes of regime change. O'Rourke provides substantive evidence of types of security interests that drive states to intervene. Offensive operations aim to overthrow a current military rival or break up a rival alliance. Preventive operations seek to stop a state from taking certain actions, such as joining a rival alliance, that may make them a future security threat. Hegemonic operations try to maintain a hierarchical relationship between the intervening state and the target government. Despite the prevalence of covert attempts at regime change, most operations fail to remain covert and spark blowback in unanticipated ways. *Covert Regime Change* assembles an original dataset of all American regime change operations during the Cold War. This fund of information shows the United States was ten times more likely to try covert rather than overt regime change during the Cold War. Her dataset allows O'Rourke to address three foundational questions: What motivates states to attempt foreign regime change? Why do states prefer to conduct these operations covertly rather than overtly? How successful are such missions in achieving their foreign policy goals?

*Roberto Speranza disse...* - Guizzardi Alfonso 2022-09-21

"Ministro della Salute in piena "pandemia", con un potere, dunque immenso, alle prese con gli amministratori delegati delle più grandi multinazionali, con capi di Stato e "big" della cosiddetta comunità scientifica. Senza alcun peso politico apparente, ma con una storia personale e familiare densa di frequentazioni politicamente importanti. Stiamo parlando di Roberto Speranza, un personaggio sfuggente che un bel giorno decide, mal consigliato, di scrivere un libro diario della sua personale "lotta" al COVID, che, ci dice, si ripromette di eradicare dalla faccia della terra con tutti i mezzi che ritiene di avere a disposizione. Ma nella sua azione ricalca i dettami del Forum di Davos e l'ideologia della Fabian Society (lo Stato Mondiale guidato dai tecnocrati), alla cui scuola si è formato e che oggi è egemone nella sinistra italiana. Da Immuni al Green Pass che costringe al vaccino, la "pandemia" sarà lo strumento per arrivare al controllo esasperato dei cittadini, facendo a pezzi la Costituzione e rendendo lo Stato di Diritto una miserabile caricatura. Ma, ovviamente, come insegna Klaus Schwab, "a fin di bene". "Tutti si sono chiesti "perché" Speranza abbia ritirato il libro e l'abbia addirittura mandato al macero: leggendo questa nostra "critica al testo" vi chiederete invece: "ma come diavolo gli è saltato in testa di scriverlo?". Bugie, omissioni, previsioni completamente sbagliate, retorica da comiziante, linguaggio ipocritamente vetero-marxista: tutto quel che serve per disegnare un personaggio che tutto avrebbe dovuto fare nella sua vita, tranne che occuparsi della nostra."

*Inventing the AIDS Virus* - Peter H. Duesberg 1998-05-01

*Dissolving Illusions* - Suzanne Humphries 2013

Starting in the mid-1800s, there was a steady drop in deaths from all infectious diseases, decreasing to relatively minor levels by the early 1900s. The history of that transformation involves famine, poverty, filth, lost cures, eugenicist doctrine, individual freedoms versus state might, protests and arrests over vaccine refusal, and much more. But the authors shows that vaccines, antibiotics, and other medical interventions

are not responsible for the increase in lifespan and the decline in mortality from infectious diseases.

*Temì 2020: Aspettando l'Apocalisse...* - Gabriele Lazzari 2021-05-26

Nel libro sono descritte in chiave mistica alcune cronache apocalittiche, divise in varie attività bibliche tramandate: anticristo, falsi profeti, lupi travestiti da agnelli compresi, rappresentati da attivisti atei e complici, uniti in categorie globali di governo: sia laico, che religioso, Queste, si stanno ora impegnando nell'intento comune: ottenere il depopolamento mondiale con l'equivoco abuso universale, sulla definizione impropria di medicinali "sperimentali", dalle finalità informatiche sulla riprogrammazione "irreversibile" delle cellule umane, il cui nome scientifico non è quello letterale arbitrariamente attribuitogli e i cui effetti futuri, sono ancora ignoti a sorpresa.

**The Vaccine** - Joe Miller 2022-02-01

Winners of the Paul Ehrlich Prize The dramatic story of the married scientists who founded BioNTech and developed the first vaccine against COVID-19. Nobody thought it was possible. In mid-January 2020, Ugur Sahin told Özlem Türeci, his wife and decades-long research partner, that a vaccine against what would soon be known as COVID-19 could be developed and safely injected into the arms of millions before the end of the year. His confidence was built upon almost thirty years of research. While working to revolutionize the way that cancerous tumors are treated, the couple had explored a volatile and overlooked molecule called messenger RNA; they believed it could be harnessed to redirect the immune system's forces against any number of diseases. As the founders of BioNTech, they faced widespread skepticism from the scientific community at first; but by the time Sars-Cov-2 was discovered in Wuhan, China, BioNTech was prepared to deploy cutting edge technology and create the world's first clinically approved inoculation for the coronavirus. The Vaccine draws back the curtain on one of the most important medical breakthroughs of our age; it will reveal how Doctors Sahin and Türeci were able to develop twenty vaccine candidates within weeks, convince Big Pharma to support their ambitious project, navigate political interference from the Trump administration and the European Union, and provide more than three billion doses of the Pfizer/BioNTech vaccine to countries around the world in record time. Written by Joe

Miller—the Financial Times' Frankfurt correspondent who covered BioNTech's COVID-19 project in real time—with contributions from Sahin and Türeci, as well as interviews with more than sixty scientists, politicians, public health officials, and BioNTech staff, the book covers key events throughout the extraordinary year, as well as exploring the scientific, economic, and personal background of each medical innovation. Crafted to be both completely accessible to the average reader and filled with details that will fascinate seasoned microbiologists, The Vaccine explains the science behind the breakthrough, at a time when public confidence in vaccine safety and efficacy is crucial to bringing an end to this pandemic.

**Special Relativity for Beginners** - Jürgen Freund 2008

This book, first appearing in German in 2004 under the title *Spezielle Relativitätstheorie für Studienanfänger*, offers access to the special theory of relativity for readers with a background in mathematics and physics comparable to a high school honors degree. All mathematical and physical competence required beyond that level is gradually developed through the book, as more advanced topics are introduced. The full tensor formalism, however, is dispensed with as it would only be a burden for the problems to be dealt with. Eventually, a substantial and comprehensive treatise on special relativity emerges which, with its gray-shaded formulary, is an invaluable reference manual for students and scientists alike. Some crucial results are derived more than once with different approaches: the Lorentz transformation in one spatial direction three times, the Doppler formula four times, the Lorentz transformation in two directions twice; also twice the unification of electric and magnetic forces, the velocity addition formula, as well as the aberration formula. Beginners will be grateful to find several routes to the goal; moreover, for a theory like relativity, it is of fundamental importance to demonstrate that it is self-contained and without contradictions. **ANNO 2019 IL GOVERNO SECONDA PARTE** - ANTONIO GIANGRANDE

Antonio Giangrande, orgoglioso di essere diverso. Si nasce senza volerlo. Si muore senza volerlo. Si vive una vita di prese per il culo. Noi siamo quello che altri hanno voluto che diventassimo. Facciamo in modo che diventiamo quello che noi avremmo (rafforzativo di saremmo) voluto diventare. Oggi le persone si stimano e si rispettano in base al loro grado di utilità materiale da rendere agli altri e non, invece, al loro valore intrinseco ed estrinseco intellettuale. Per questo gli inutili sono emarginati o ignorati. Se si è omologati (uguali) o conformati (simili) e si sta sempre dietro alla massa, non si sarà mai primi nella vita, perché ci sarà sempre il più furbo o il più fortunato a precederti.

**The Forgotten Revolution** - Lucio Russo 2013-12-01

The period from the late fourth to the late second century B. C. witnessed, in Greek-speaking countries, an explosion of objective knowledge about the external world. While Greek culture had reached great heights in art, literature and philosophy already in the earlier classical era, it is in the so-called Hellenistic period that we see for the first time — anywhere in the world — the appearance of science as we understand it now: not an accumulation of facts or philosophically based speculations, but an organized effort to model nature and apply such models, or scientific theories in a sense we will make precise, to the solution of practical problems and to a growing understanding of nature. We owe this new approach to scientists such as Archimedes, Euclid, Eratosthenes and many others less familiar today but no less remarkable. Yet, not long after this golden period, much of this extraordinary development had been reversed. Rome borrowed what it was capable of from the Greeks and kept it for a little while yet, but created very little science of its own. Europe was soon smothered in the obscurantism and stasis that blocked most avenues of intellectual development for a thousand years — until, as is well known, the rediscovery of ancient culture in its fullness paved the way to the modern age.

**Thinking About Children** - Donald W. Winnicott 2018-05-08

Thinking About Children collects thirty-one papers, of which twenty-eight have never previously been published. As might be expected, they range widely in tone and content from concise clinical observations to more general meditations including the landmark paper "Towards an objective study of human nature". Of particular interest are sections on autism and

psychosomatics, where the author's thinking can be seen to foreshadow more recent developments, such as Frances Tustin's work on autism. Together with a substantial introduction by the editors, this book is indispensable for those acquainted with the author's work, and an ideal introduction for those who have not yet encountered the extraordinary clarity and depth of his thought.

La costituzione per tutti - Angelo Greco 2022-11-24T00:00:00+01:00 Angelo Greco, da anni impegnato a portare la legge - e soprattutto la sua corretta interpretazione - in ogni casa, racconta in questo libro la nostra Costituzione. Ogni articolo è letto e spiegato attraverso la doppia lente di cui l'autore dispone: quella dell'avvocato e quella del divulgatore capace di parlare a tutti grazie a un linguaggio sempre chiaro e comprensibile, lontano dal famigerato "legalese". Cos'è la Costituzione? Come è nata e a cosa serve? Chi ha il potere in Italia? La democrazia è davvero un bene? Cosa succede se il Parlamento non rappresenta più la volontà del popolo? Fin dove il governo può limitare le libertà dell'individuo? #### Oscar the Guardian Cat - Chiara Valentina Segre 2018-04-03

Inspired by the true story of Oscar, a special cat who watches over the residents of Steere House Nursing and Rehabilitation Center in Providence, Rhode Island. #### Fear in the World - Corrado Alvaro 2021-03-23

Corrado Alvaro's *Fear in the World* was published a decade before Orwell's 1984, but is not well known outside Italy, perhaps because of the timing of the publication just before the Second World War. Alvaro had visited the Soviet Union as a journalist, but was probably motivated to write this dystopian novel by aspects of modernity that concerned him, particularly the use of fear for political purposes which was not afflicting Russia alone. He was interested in the psychology of fear and the extent to which individuals and the crowd participate in their own regimentation. The names of countries, cities and leading political figures such as Stalin are never referred to, but as in the works of Orwell they are clearly identifiable from their descriptions: the author was writing in a Fascist country against a Fascist censor and had to cut his cloth accordingly. This is a dark novel, not quite as dark as 1984, but it is

more claustrophobic. The feeling of inevitability is there from the first page, and it is experienced as we experience real life. The imagined truth takes us closer to where we really are. The travails of the love affair at the core of this novel quite possibly arise from perceptions that the regime exploits in a quite ad hoc manner. And it leads the reader through an extraordinary sequence of events and observations which encompass a vast range of emotions and ideas expressed in a unique prose style. The modern Leviathan appears to be a well-oiled machine, but towards the end it becomes clear that this is merely an appearance of efficiency and omniscience, but appearances can be powerful. Alvaro is particularly interested in how the state uses quasireligious mechanisms and rituals to assert its power. The central character returns to the country after a long period abroad, and sees things initially through foreign eyes, living a life similar to the one Alvaro did when in Russia. He is not a natural rebel, and very much wants to fit in, but he finds this difficult to achieve. The regime boasts that it has an ally in history, but destiny is elusive, however much the characters feel that they are driven by it.

The Making of the British Landscape - Francis Pryor 2010-06-03

This is the changing story of Britain as it has been preserved in our fields, roads, buildings, towns and villages, mountains, forests and islands. From our suburban streets that still trace out the boundaries of long vanished farms to the Norfolk Broads, formed when medieval peat pits flooded, from the ceremonial landscapes of Stonehenge to the spread of the railways - evidence of how man's effect on Britain is everywhere. In The Making of the British Landscape, eminent historian, archaeologist and farmer, Francis Pryor explains how to read these clues to understand the fascinating history of our land and of how people have lived on it throughout time. Covering both the urban and rural and packed with pictures, maps and drawings showing everything from how we can still pick out Bronze Age fields on Bodmin Moor to how the Industrial Revolution really changed our landscape, this book makes us look afresh at our surroundings and really see them for the first time.
